

EU H2020 SECLI-FIRM: Project objectives and building blocks

The EU H2020 project *The Added Value of Seasonal Climate Forecasting for Integrated Risk Assessment (SECLI-FIRM)* is demonstrating how the use of improved climate forecasts, out to several months ahead, can add practical and economic value to decision-making processes and outcomes in both the energy and water sectors.

SECLI-FIRM is proud to announce the first in a new series of webinars which will introduce the overall project objectives and present some results from the case studies which form the building blocks of the project. An emphasis will also be placed on the interaction with stakeholders and the framework for assessing the value of seasonal forecasts.

[REGISTER HERE](#)

After registering, you will receive a confirmation email containing information about how to join the webinar. For further information, talks, abstracts and presenter biographies, visit secli-firm.eu

A recording will be available after the webinar.
